

March Capacity

Complete source audit, formula, progression priorities, and rally-capacity exclusions

Bottom line

For an early account, the repeatable priorities are: level all five heroes in the main march and use the +12% temporary buff for important attacks. There is no active early Battle Research capacity line.

- Hero level is the largest clean formation source: each level 60 hero supplies +1,600, while each level 150 hero supplies +20,000.
- The apparent Battle Research March Capacity I-III rows are legacy data in a tree explicitly marked IsOld = 1; they are not exposed in the current UI.
- The percentage buff does not multiply the hero-level flat addition. It multiplies only the base-capacity bucket.
- Rally capacity, extra march queues, garrison size, march speed, and troop load are different statistics.

Evidence standard

This report was derived from the installed Windows client's decoded BinaryConfig and English language pack. Rows were traced by benefit ID into the actual march-capacity calculator. Entries are separated into practical current sources, late/event sources, and client-resident but unverified legacy content. No external guide was treated as authoritative.

CONFIRMED	Directly feeds a march-capacity input and has a coherent current-game path.
LATE / EVENT	Valid client rule, but gated behind advanced systems or a limited mode.
UNVERIFIED	Ships in the client, but appears hidden, inherited, legacy, or has ambiguous units.

1. The actual calculation

$$\text{March capacity} = \text{floor}(\text{Base capacity} \times (1 + \text{total percentage}) + \text{flat additions})$$

The client calculator is `calc_march_capacity` (ID 400124). It uses base benefit 300328, percentage benefit 300330, and flat benefit 300332. The result is rounded down. This split matters because a +12% item applies before the flat hero-level amount is added.

Bucket	Benefit ID	What currently feeds it	How it behaves
Base	300328	Research, some hero intimacy nodes, Behemoth talents, certain titles/event buffs	Multiplied by +6% / +12%
Percentage	300330	Temporary city buffs; a limited commercial event skill	Percentages add together inside the multiplier
Flat	300332	Hero levels, selected hero SLG talents, some decorations	Added after the percentage calculation

Formation-specific variants

The client also defines Infantry, Cavalry, Ranged, and all-troop variants, plus separate Stalwart, Rover, Aeronaut, and Mariner hero-capacity fields. These do not automatically raise every march: they apply only when the relevant troop or hero-faction rule is used.

What the client does not expose

The initial account/server base is supplied through runtime account state rather than a static client row. Therefore the client files fully explain the modifiers but cannot reconstruct one player's exact displayed total without reading that player's live profile.

Worked example

Five level 60 heroes contribute $5 \times 1,600 = 8,000$ flat capacity. If an account has 25,000 in its base bucket from runtime and active base sources, a +12% item changes that portion to 28,000; the hero portion remains 8,000. The subtotal is 36,000 plus any other active sources.

2. Heroes: the most visible source

Every configured hero uses the same march-capacity progression at a given level. The value is attached to the hero's BenefitsTroops record, so it belongs to the dispatched formation. A five-hero march adds the capacity from all five selected heroes; the lead slot is not the only contributor.

Hero level	Capacity per hero	Five equal-level heroes
1	+ 10	+50
10	+ 100	+500
20	+200	+1,000
30	+400	+2,000
40	+600	+3,000
50	+1,100	+5,500
60	+1,600	+8,000
70	+2,600	+13,000
80	+3,600	+18,000
90	+4,600	+23,000
100	+6,200	+31,000
110	+8,200	+41,000
120	+10,200	+51,000
130	+13,000	+65,000
140	+16,000	+80,000
150	+20,000	+100,000

Practical consequences

- Level the entire main five, not only the first hero. Capacity is identical across heroes at the same level, so hero choice should be based on combat role and synergy.
- Power Plant level matters indirectly because it raises the hero level ceiling. Normal Power Plant levels do not carry a direct march-capacity benefit in the decoded building rows.
- Rarity and ordinary stars have no direct march-capacity benefit entry. They can still unlock talents or improve combat power, which is a separate effect.

Hero-specific additions

Source	Heroes	Maximum shown in config	Interpretation
SLG talent line	Nikola, Sarge, Becca	+800 each	Four ranks: +200 / +400 / +600 / +800 flat. Applies when that hero's troop benefits are active.
SLG talent line	Basile	+800	Configured, but Basile is not in the currently surfaced base roster; treat as unreleased or dormant.
Intimacy nodes	Nikola, Maddie, Lucky	+1,345 each	Twenty incremental base-capacity nodes per hero. Cumulative sum shown; likely formation-bound because stored under BenefitsTroops.

3. Confirmed and practical capacity sources

Priority	Source	Maximum / choices	Notes
1	Hero levels	+20,000 per hero at level 150	At level 60: +1,600 each. Five level 60 heroes supply +8,000.
2	Temporary March Capacity item	+6% for 2h or 8h	Unlocked at Power Plant 5 / 10. Percentage bucket.
2	Temporary March Capacity item	+12% for 8h or 12h	Unlocked at Power Plant 10 / 15. Percentage bucket.
3	Hero talent / intimacy	+800 / +1,345 on named heroes	Useful only if the hero also belongs in the combat formation.

The four temporary items share city-buff group 4500017. Treat them as alternative tiers/durations, not as +36% that can be stacked together.

Power Plant star preview

The client help panel advertises march-capacity increases during the Power Plant star progression. Its preview values run from 3,350 at the first star group to 4,500 in later groups. However, these preview amounts are not wired to benefit 300328/300332 in the decoded building row itself. They are therefore evidence of a late progression feature, but not safe to sum into a current account total until the star system is unlocked and the live UI confirms the awarded amount.

Star help group	0	1	2	3	4	5	6	7	8	9
Preview amount	3,350	3,518	3,693	3,839	4,100	4,100	4,100	4,100	4,500	4,500

4. Late-game and event sources

System	Configured maximum	Scope / warning
March Expansion I	+10,000	Special Army research tree. Base bucket.
March Expansion II	+15,000	Special Army research tree. Combined March Expansion total: +25,000.
Advanced Research	+1,000 in each of 3 branches	Three branches can contribute +3,000 total if all apply.
T12 Advanced Research	+3,000 in each troop branch	Infantry, Cavalry, and Ranged rows use the generic base benefit. Potential +9,000 total in the late T12 system.
Faction research	+5,000 per faction	Two techs per faction: +2,000 and +3,000. Only Stalwart, Rover, Aeronaut, or Mariner heroes as appropriate.
Behemoth - Swift Lightning	+3,000 to +15,000	Five talent levels. Base bucket. Confirm which Behemoth talent is active/inherited before combining.
Behemoth - Wave Breaker	+3,000 to +15,000	Five talent levels. Same caution: do not blindly add both Behemoth trees.
Commercial event active skill	+10% for 30 min	12-hour cooldown in config. Limited event rule, not a permanent account bonus.
Abyss talent buff	+12,000	Mode-specific configured buff.
Kingdom title - Iron Fist	+2,500	Temporary ruler-assigned title.
Kingdom title - Chicken	-1,500	Negative title can reduce capacity.

Faction research names

Stalwart: Earthen Dominion I-II. Rover: Wild Dominion I-II. Aeronaut: Tempest Dominion I-II. Mariner: Naval Expansion I-II. These have their own calculators and are not interchangeable with general march capacity.

System guard, not a bonus

The configuration key `open_sever_new_march_capacity = 999999|999999999` behaves like an open-server threshold or safety cap. It is not an obtainable capacity source and should not be advertised as one.

5. Client-resident sources that should not be advertised yet

The client contains substantial inherited and future configuration. The following rows technically feed capacity benefit IDs, but their current availability is not established. They belong in an audit appendix, not in an alliance progression guide.

Entry	Raw effect	Why it is not treated as current
Legacy Battle Research I-III	+25,000 combined	These rows belong to <code>research_tree_battle</code> , and that tree is explicitly marked <code>IsOld = 1</code> . It is not exposed in the active Lab 1 research UI.
16 decorative building lines	+1,200 or +2,000 at max level	Internal names reference Nanami, Sage, Roxy, Candy, Girls, Lucky, Double Dogs, and 2022-2023 seasonal decorations. They look inherited/legacy and are not surfaced in the current Tiles UI.
Hidden season title	+1,500	The Fittest Season title row is marked invisible in <code>dress_up_main</code> .
Commercial collection rank 18	Raw value 500 in percent field	Normal percentages are stored as decimals such as 0.06. The unit is anomalous; it must not be interpreted as +500% without live validation.
Basile SLG talent	+800	Valid hero talent data, but no currently surfaced base hero.
Power Plant star help	+3,350 to +4,500 previews	The presentation exists, but the direct benefit linkage is not in the local building row.

No direct march-capacity source found

The v2.6.0.235 source scan found no direct capacity benefit in VIP levels, chief/player levels, appointments, ordinary hero gear, exclusive hero gear, Behemoth skins, or visible settlement/march skins. These systems may increase combat power, speed, or other troop statistics, but they are not march-capacity inputs in the current local tables.

Indirect effects

- Power Plant level unlocks higher hero levels and stronger capacity items.
- Hero stars or rarity can unlock talents or progression gates, but do not supply a generic capacity value by themselves.
- Combat strength can make a march better without making it larger.

6. Rally capacity is a separate calculation

$$\text{Rally capacity} = \text{floor}(\text{Rally base} \times (1 + \text{rally percentages}) + \text{rally flat additions})$$

The rally calculator is ID 400132 and uses different benefit IDs: 300346 base, 300347 percent, and 300348/301360 flat. Raising rally capacity increases the total troops accepted by a rally; it does not increase the personal march each participant can send.

Rally-only source	Effect	Meaning
Temporary rally-capacity item	+100,000	Configured for 5, 15, 30, or 60 minutes in the Normal scene. Same effect, different duration.
Ghoulion returning-player bind buff	+10% rally capacity	Added only to the Alliance Boss rally formula. It is not a general personal-march bonus.
All-Star War Hall conversion	Conditional flat addition	War Hall troop limit is converted to personal flat capacity only when joining rallies on specified event tile types. This is an All-Star event mechanic, not normal-world capacity.
Heist rule	Fixed to current maximum	The event uses the player's existing maximum march capacity; it does not create a new permanent source.

Commonly confused statistics

- March queue count: how many marches can be outside at once.
- Rally capacity: the combined size the rally leader can host.
- Garrison capacity: defenders held in a city or structure.
- Troop load: resources carried after gathering or combat.
- March speed: travel time, not troop count.
- Hero escort count and ordinary combat stats: separate from march capacity.

7. Recommended progression order

Order	Action	Reason
1	Keep the main five heroes at the current level cap	All five contribute. At level 60 this is +8,000 total; at level 150 it is +100,000.
2	Use the +12% item only for high-value windows	It is temporary and multiplies base capacity, not the full displayed total.
3	Take a capacity Behemoth talent when its opportunity cost is acceptable	Up to +15,000 base in the configured talent line.
4	Use Nikola, Sarge, or Becca capacity talents only when the hero remains a good combat choice	An extra +800 is usually not worth breaking a stronger five-hero synergy.
5	Pursue March Expansion I-II in Special Forces when it unlocks	This is the active research capacity path: Lab 1 level 15 plus 61 Alliance Duel research progress.
6	Continue into advanced, T12, and faction trees	These provide further capacity later and may be troop- or faction-specific.

How to verify an account in-game

- Record the displayed maximum with a fixed five-hero formation and no temporary item.
- Activate one +6% or +12% item and record the difference. That delta reveals the base bucket approximately: delta / percentage.
- Swap one hero for an equal-level hero. The total should remain unchanged unless a talent, intimacy node, or faction rule differs.
- Raise one hero across a listed level breakpoint and compare the exact flat increase.

Example diagnostic

If +12% raises the displayed march by 6,000, then the multiplied base bucket is approximately 50,000. Any remaining displayed capacity comes from flat hero/talent additions and runtime terms. This is the cleanest way to reconcile an account without packet inspection.

Appendix A. Configuration evidence

File	Evidence used
benefit_calc.bin	calc_march_capacity 400124; troop-specific 400325/400326/400328; all-troop 400552; faction 400707-400710; rally 400132; Ghoulion rally 400350.
benefits.bin	Definitions for 300328 base, 300330 percent, 300332 flat, troop-specific and faction fields, rally fields, and All-Star War Hall conversion source.
survivor_level_main.bin	Per-hero level curve from +10 at level 1 to +20,000 at level 150.
survivor_slg_talent_main.bin	Nikola, Sarge, Becca, and Basile talent tiers +200 to +800.
survivor_intimacy_level_main.bin	Twenty incremental capacity nodes for Nikola, Maddie, and Lucky; +1,345 cumulative per hero.
research_main.bin / research_group.bin	Legacy Battle rows +25,000 in IsOld tree; active March Expansion +25,000; faction research +5,000 per faction.
research_tree.bin	Confirms research_tree_battle is IsOld = 1. Active capacity research is Special Forces, gated by Lab 1 level 15 and Alliance Duel progress 61.
advance_research_main.bin	Three late branches, +1,000 each at max.
advance_research_t12_main.bin	Three troop branches, +3,000 each at max.
city_buff_main.bin	+6% and +12% march items; +100,000 rally-only items.
behemoth_talent.bin	Swift Lightning and Wave Breaker, +3,000 to +15,000.
buildings.bin	Capacity decorations and All-Star War Hall event benefit rows.
buildings_star_help_preview.bin	Power Plant star help preview amounts.
activity_commercial_talent_skill_rule.bin	+10% event skill for 30 minutes with 12-hour cooldown.
buff.bin	Abyss mode +12,000 capacity buff.
kingdom_war_king_title.bin	+2,500 and -1,500 kingdom titles.
dress_up_main.bin	Hidden +1,500 season title; no visible current skin capacity source found.
benefit_conversion_map.bin	All-Star War Hall rally-join conversion into personal flat capacity.
go_back_bind_alliance_buff.bin	+10% Ghoulion rally capacity for the returning-player bind buff.
game_configs.bin	Open-server capacity guard; not an obtainable modifier.
language_en.json.bin.enc	Player-facing descriptions and source names.

Audit limits

This is a static client audit, not a server dump. The server may suppress dormant rows, apply event eligibility, or provide the initial runtime base. Numeric maxima are configuration values, not a guarantee that a feature is currently obtainable on State #1007. The report intentionally labels ambiguous content instead of presenting every shipped row as live.

Version

Installed game client: 2.6.0.235. Launcher: 1.0.0.1285. Audit date: 11 September 2026.
