

Reservoir Raid: Alliance Battle Guide

A client-verified event overview for every participant: timing, scoring, objectives, common roles, communication and adaptation during battle.

Win condition in one line

Finish with more Alliance Purified Water. Buildings and Water Tanks win the match; kills only add Solo Water.

Before entry

- Only selected participants can enter. Up to 30 participants plus 10 reservists; reservists can enter after 5 minutes if fewer than 30 participants are inside.
- Recall every march and scout. Remove reinforcements from the Comms Outpost. Do not be burning, under attack or in a rally when entering.
- Prepare best PvP hero squads. Research, Alliance tech, Chief talents, VIP, item and skin bonuses remain active.
- Use one voice/chat commander. Everyone must know their opening target and T+15 rotation before entry.

Battle timeline

T+0 to T+3	Preparation	Enter, relocate beside the assigned lane, set marches and confirm rally leaders.
T+3	Stage 1 opens	2 Treatment Centers, 4 Processing Plants, Solar Power Station and Helipad.
T+14	Pre-position	R4 may pre-position announced Stage 2 groups. Everyone else holds until relieved.
T+15	Stage 2 opens	Central Reservoir, Munitions Factory and Dev Compound.
T+25 / 35 / 45	Water Tank waves	Configured waves of 3, 3 and 4 tanks. Sweep in pairs; do not wait idle beforehand.
T+60	Scoring ends	Highest Alliance Water wins. The instance force-exits at approximately T+65.

Non-negotiable rules

1	Do not chase kills away from objectives. Attacking defeats give 80 Solo Water per 10,000 enemy troop power; defending gives 40, but neither adds Alliance Water.
2	Do not trickle attacks into a defended building. Rally or hit in a synchronized wave, then reinforce in layers.
3	Heal continuously. Troops do not die, the Field Hospital is unlimited, healing costs no resources and all wounded recover when leaving.
4	Advanced Relocation is free but has a cooldown. Save moves for objective rotations; Helipad control halves the cooldown.
5	Leaving early blocks re-entry for 10 minutes. Extinguish settlement fire or relocate before Barricade Defense reaches zero.

Objective map and priorities

Isometric battlefield view rebuilt from the raw client locations. This matches the on-screen quadrants rather than plotting x/y as a flat Cartesian grid.

BLUE DASHED ZONES - possible Water Tank collection areas (client radius: 15). Waves activate 3, 3 and 4 tanks across these four zones at T+25, T+35 and T+45. They are temporary gathering targets, not capturable buildings.

Exact objective values

Objective	Opens	1st / repeat Alliance	Alliance income	Why it matters
 Central Reservoir	T+15	9,000 / 4,500	1,800/min	Highest income; anchor strongest defense.
 Treatment Center x2	T+3	6,000 / 3,000	1,200/min each	Core early income; defend continuously.
 Processing Plant x4	T+3	3,000 / 1,500	600/min each	Efficient lane control; do not leave #2/#4 empty.
 Solar Power Station	T+3	1,200 / 600	240/min	Reduces building control time by 50%.
 Abandoned Helipad	T+3	1,200 / 600	240/min	Reduces relocation cooldown by 50%.
 Munitions Factory	T+15	1,200 / 600	240/min	+20% troop damage and +20% defense in current client.
 Dev Compound	T+15	1,200 / 600	240/min	Sends Infected at enemy buildings; strength stacks up to 4.
 Water Tanks	T+25/35/45	Gathering	Alliance + Solo	10 configured spawns across 3 waves; sweep fast.

All standard buildings require 180 seconds of control. Solar ownership cuts that by 50%. 'First' means the first time your alliance controls that building; later captures use the repeat award.

Common roles and responsibilities

These are examples of how teams may be used, not a prescribed deployment. Your R4s may change every assignment according to attendance, strength, spawn position and the opponent.

FLEX / RESPONSE	Usually mobile players and reliable rally leads	Help the first contested objective, replace weakened defenders and prepare for Stage 2. Flex does not automatically mean 'rush Center'; follow the live call.
TREATMENT	Stable defenders and reinforcement depth	These are the most valuable Stage 1 income objectives. Hold them, report incoming rallies early and avoid leaving both for a distant fight.
PROCESSING	Small capture teams and scouts	Secure lane income, watch enemy movement and reinforce nearby objectives. Some teams may rotate at T+14, but only when explicitly relieved.
UTILITY	Solar and Helipad teams	Solar accelerates control; Helipad accelerates relocation. Their strategic value can exceed their direct income, depending on the current battle.
STAGE 2	Center, Munitions and Dev teams	Assignments begin before T+15. Center is high income, Munitions gives combat buffs, and Dev disrupts enemy garrisons; priority depends on the score and map.
TANK / RESERVE	Available marches, scouts and collectors	Before T+25: reinforce, defend and scout. During tank waves: collect assigned zones without stripping critical buildings of every defender.

The live plan always wins

This page explains functions, not your alliance's exact plan. At entry, follow the target announced by R4. Do not self-reassign because a different objective looks more valuable; report the situation and wait for a rotation call.

Battle calls and responses

Opening	Call occupied / contested / lost for all eight Stage 1 objectives. Send flex only where needed; do not collapse every lane onto one fight.
T+13	R4 announces any Stage 2 rotations. Only named groups move; Stage 1 anchors stay unless explicitly relieved.
T+15	Execute the announced targets as one wave. Center, Munitions and Dev priorities can change with the score and enemy deployment.
T+23	R4 announces tank collectors and zones. Do not pull every defender; tanks cannot compensate for losing major income buildings.
If ahead	Hold Center + both Treatment Centers first. Trade isolated Plants rather than draining teleports and marches.
If behind	Flip two objectives in one timed wave. Use Dev Compound on the enemy's most valuable garrison and Munitions buff for the main rally.
Last 10 min	Protect income; do not abandon Center for low-value kills. Only launch a desperate multi-target flip if the score gap requires it.

Every player's battle card

- On capture: immediately reinforce; do not teleport away while your march is the garrison anchor.
- On loss: recall, heal, wait for the commander and return as a wave - never feed solo marches.
- Keep at least one march available for emergency reinforcement or a tank spawn.
- Report enemy rally leader, countdown and estimated marches. Short format: TIME - TARGET - ENEMY COUNT - ACTION.
- Personal reward floor starts at 2,000 Solo Water; higher bands are 20k, 42k, 90k and 180k. Do not sacrifice the alliance score to farm them.

Verification and limits

Primary: installed client configuration tables AvaPhase, AvaBuildings, AvaMineCollection, AvaFreeItems, AvaTroopsScore, Buff and the English language pack. Objective artwork was extracted from the installed Unity asset bundles. Public guides were used only as a strategy cross-check. The client configuration is authoritative where third-party numbers conflict. R4s must confirm attendance, power and rally leaders before publishing assignments.
