

STALWART BATTLEFIELD LEADERBOARD

What it is, what the displayed level means, and what the client actually reveals

It is the Mountain Citadel ranking inside Honor Expedition. It ranks the highest Stalwart-lane level cleared - not Hero Power, damage, or Glory Coins.

How the ranking value works

Input	Counts?	Effect on rank
Highest Mountain Citadel level cleared	YES	Primary and only displayed ranking value
Difficulty number	YES	A higher difficulty is further progression
Stage within the difficulty	YES	A higher stage is further progression
Team Power, damage, clear time	NO visible score	They help win, but are not displayed leaderboard metrics
Stalwart Hero count / Glory Coins	NO	No direct leaderboard points

Conceptual progression index **(Difficulty - 1) x 20 + cleared stage**

Example 4-20 = index 80; 5-1 = index 81, so 5-1 ranks higher

What your screenshot proves

Rank	Name	Level
1	[swg]Addalicious	4-20
2	[swg]Scroodik	4-20
3	[swg]Боба	4-20
4	[rus]kosm0s	4-20
5	[swg]Даниял	4-20
6	[rus]Gina	4-20
7	[rus]Aaa 58	4-20

The visible leaderboard shows several players at **4-20**, yet they occupy different ranks. That confirms the displayed value alone does not resolve ties.

The current client defines only one public column for this board: **Level**. It contains no secondary field for Power, damage, remaining health, or completion time.

Therefore, the exact tie-break is **server-side and undisclosed**. Reaching the level first is a plausible explanation, but it is not confirmed and should not be stated as fact.

Mode rules and practical implications

Battlefield	Favoured faction	Faction benefit
Mountain Citadel	Stalwart	+20% Attack, +20% Defense, +20% Health
Howling Sands	Rover	Separate leaderboard
Azure Apex	Aeronaut	Separate leaderboard

Progress resets every Tuesday, Thursday, and Saturday at 00:00 server time. During each cycle, a hero can participate in only one battlefield. Difficulty is locked after selection, so distribute your strongest faction teams before committing.

Source basis: decoded configuration and English localization from Tiles Survive client build 2.6.100.261, plus the supplied in-game leaderboard screenshot. The server's tie-break algorithm is not present in the client configuration.
